EDUCATION

Boston University | Boston, MA

December 2025

B.A. in Computer Science GPA: 3.76/4.0

Coursework: Graduate Data Structures & Algorithms, Design Patterns, Databases, Streaming, Public Speaking, Networks & Markets, Cybersecurity, Systems I & II, Functional Programming, Linear Algebra, Object Oriented Programming, Networking

SKILLS AND AWARDS

Languages: Python, PySpark, Java, TypeScript, SQL, Swift, C, HTML, JavaScript, CSS, OCaml, Terraform, C++

Frameworks/DBs: AWS, Databricks, Next.js, React.js, Node.js, Kafka, Flask, PostgreSQL, MySQL, MongoDB, Snowflake

Tools/Skills: Git, Docker, Flink, Vim, Unix, Jira, Kanban, Slack, Figma, Google Drive, Excel, Confluence, AGILE, CI/CD

Awards: Eagle Scout, Black Belt, Boston University Dean's List (6x)

EXPERIENCE

Software Engineer Intern

June 2025 - August 2025

Addepar | Mountain View, CA

- Automated intensely manual & costly work done by 3 full-time Data Analysts, **eliminating 47.6% of hardest current and future assets needing classification with 95%+ precision** via monthly Databricks Jobs **saving \$100k+ annually**
- Developed and Deployed robust RAG Asset Classifier on Databricks leveraging Python, PySpark, and SQL increasing Data Quality across the entire company, and increasing value & marketability of R&D's new data products
- Went from 0 to 1, experimenting with multiple LLM & Vector Database solutions in AWS & Databricks before building out a robust, repeatable, and auditable classification pipeline to promote visibility and long term use

Cybersecurity Teaching Assistant

December 2024 - May 2025

CS598 | Boston University

- Launched VMs with AWS LightSail + DigitalOcean and Containers with Docker to act as nodes for use in AWS VPCs
- Created and taught lessons on VPNs and various technologies like Tailscale, Twingate, Veracode, JumpCloud, etc.

Software Engineering Intern

May 2024 - May 2025

Spark! | Boston University

- Architected and built BU Community Service portal with Next.js + PostgreSQL, containerized with Docker, deployed with CI/CD, **serving 17k students** and automating work for admins while aggregating data
- Optimized data integration and relevance of the Boston Police Index using advanced SQL queries, GraphQL, and Railway for seamless multi-table connectivity and enabled user feedback with reCAPTCHA and Github APIs
- Visualized data into interactive filterable histograms and stacked bar charts on officer profiles with Chart.js

Software Engineering Intern

March 2024 - April 2024

Humphrey Fellows | Boston University

- Developed full-stack financial management web app using React.js + MongoDB with interactive dashboard, and functionality to support downloading records as excel sheets, allowed client to apply for \$5000 of grant funding
- Created REST API endpoints to NoSQL DB to handle complex interactions + streamline accounting processes

Machine Learning Intern

June 2023 - August 2023

AtScale | Boston, MA

- Built Snowflake Snowpark™ solution for **Fortune 100 financial services customer** to reduce data movement and compute cost using SQL and PySpark and created comprehensive unit tests for AtScale AI-Link
- Refactored AtScale AI-Link codebase, enhancing API accessibility/consistency to improve customer experience
- Developed Snowflake Snowpark™ and Databricks ML demos on AtScale to support R&D and sales teams

TECHNICAL PROJECTS

ACM DEBS 2025 Grand Challenge

Apache Flink, Java, Kubernetes, Docker | <https://github.com/owenm-26/acm-debs-grand-challenge-2025>

- Built, deployed, and submitted Flink application to international Data Streaming competition, solving the challenge of catching significant 3D Printing errors in real time to identify structural weaknesses and mitigate material waste

Course Genie

Angular, PostgreSQL, Python, Selenium, OR-Tools | <https://github.com/owenm-26/course-genie>

- Implemented algorithm in Python using Google OR-Tools that prescribes students the optimal course schedule to maximize their General-Education requirements, accounting for limitations such as time conflicts and prerequisites
- Automated scraping of currently available courses from BU Course Search using Selenium, then efficiently storing only necessary fields in various database tables in PostgreSQL using SQLAlchemy ORM and exposing them to the UI
